VISUALISATION OF GLOBAL SUPERSTORE DATA USING POWER-BI

Project Report submitted in partial fulfillment of the requirements for the award of the Degree of

MASTER OF BUSINESS ADMINISTRATION

of

BENGALURU CITY UNIVERSITY

Submitted By

BASAVARAJU.S

P18UZ23M015063

Under the guidance of

Ms. BRUNDA S

Faculty

BENGALURU CITY UNIVERSITY SCHOOL OF MANAGEMENT STUDIES

Central College Campus, Ambedkar Veedhi, Bengaluru – 560 001

TRAINER: Mr. KARTHIK S

Assistant manager

LEARNING LINKS FOUNDATION AND DELL TECHNOLOGY

DECLARATION BY THE STUDENT

I hereby declare that **"VISUALISATION OF GLOBAL SUPERSTORE DATA USING POWER-BI"** is the result of the project undergone by me during the 3rd semester in partial fulfillment for the award of Master's Degree in Business Administration by Bengaluru City University.

I also declare that this report is the outcome of my own efforts and that it has not been submitted to any other University or Institute for the award of any other Degree or Diploma or Certificate.

Place: Bangalore

Name: BASAVARAJU.S 3rd SEM, MBA

Date:21.04.2025

Register Number: P18UZ23M015063

TRAINER CERTIFICATE

This is to certify that the **BASAVARAJU S** bearing University Registration Number **P18UZ23M015063** has undergone project from me on Data Visualization in Power BI from 05 March 2025 to 17 April 2025, as a part of the training program during III Semester from Bengaluru City University, Bengaluru for the award of Degree of Master of Business Administration.

Place: Bangalore

Date:21.04.2025 **Signature**

GUIDE CERTIFICATE

This is to certify that the Project Report "**VISUALISATION OF GLOBAL SUPERSTORE DATA USING POWER-BI**" Submitted by **BASAVARAJU.S 3RD SEM**, REG NO: **P18UZ23M015063,** to Bengaluru City University, Bengaluru for the award of Degree of Master of Business Administration is a record of work carried out by him under my guidance.

Place: Bangalore

Date: 21.04.2025 **Signature**

CERTIFICATE OF ORIGINALITY

This is to certify that the Project report entitled "**VISUALISATION OF GLOBAL SUPERSTORE DATA USING POWER-BI"** is an original work of **Mr. BASAVARAJU.S 3RD SEM,** bearing University Register Number **P18UZ23M015063** and is being submitted during 3rd semester in partial fulfillment for the award of the Master's Degree in Business Administration of Bengaluru City University. The report has not been submitted earlier either to this University /Institution for the fulfillment of the requirement of any course of study. **Mr. BASAVARAJU.S** is guided by **Ms. BRUNDA S** who is the Faculty Guide as per the regulations of Bengaluru City University.

Plagiarism website used is Turnitin & Plagiarism Percentage is 7 %.

SIGNATURE AND SEAL OF DIRECTOR

CONDUCT CERTIFICATE

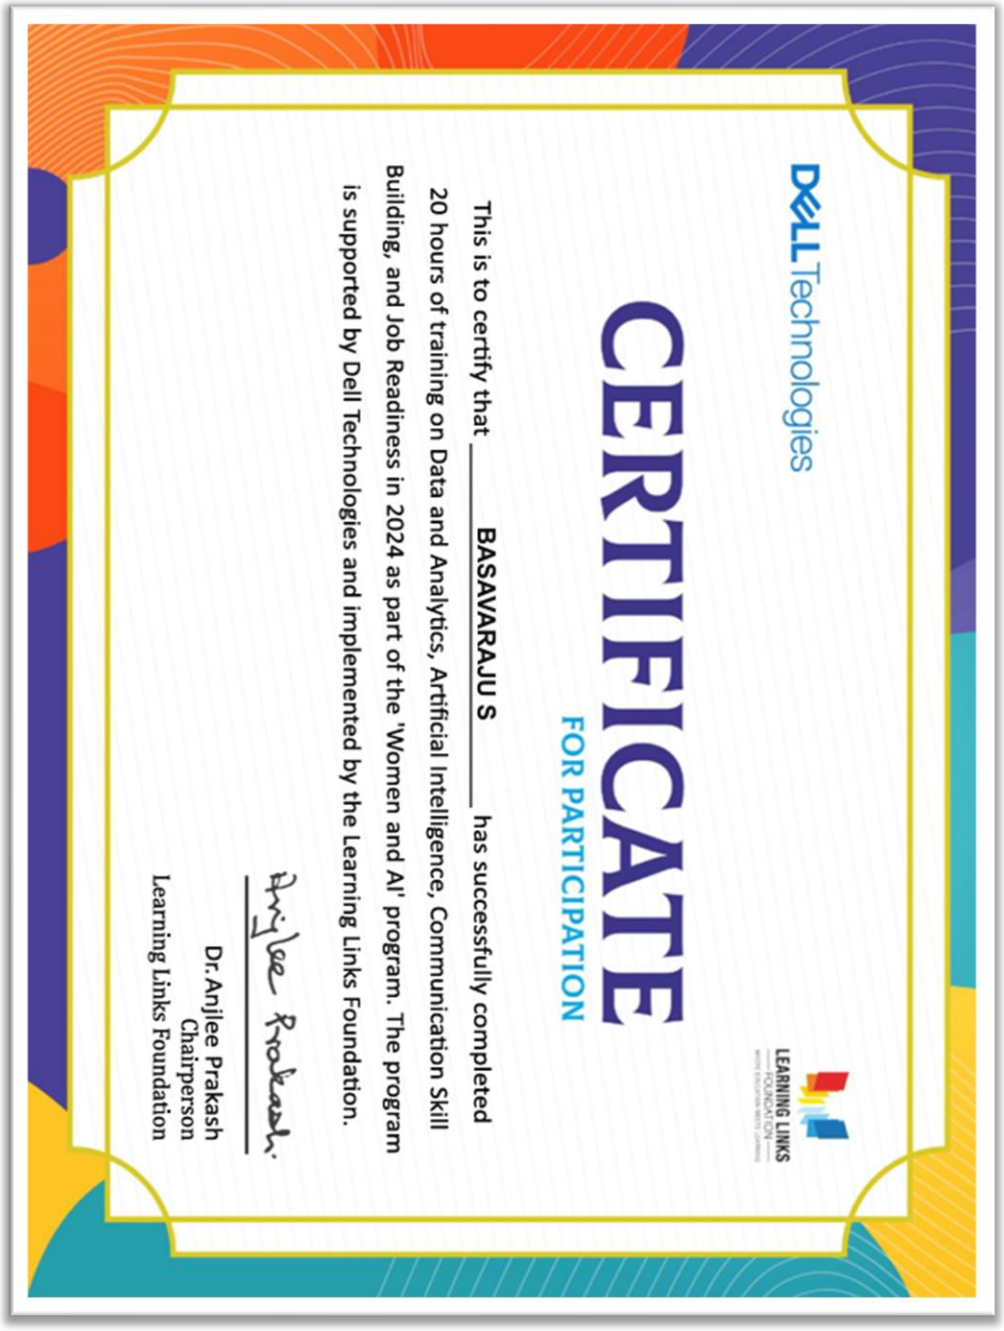

This is to certify that the **BASAVARAJU S** bearing University Registration Number **P18UZ23M015063** has undergone project from me on Data Visualization in Power BI from 05 March 2025 to 17 April 2025, as a part of the training program during III Semester from Bengaluru City University, Bengaluru for the award of Degree of Master of Business Administration.

During the period of training his/her conduct was excellent/satisfactory/not satisfactory.

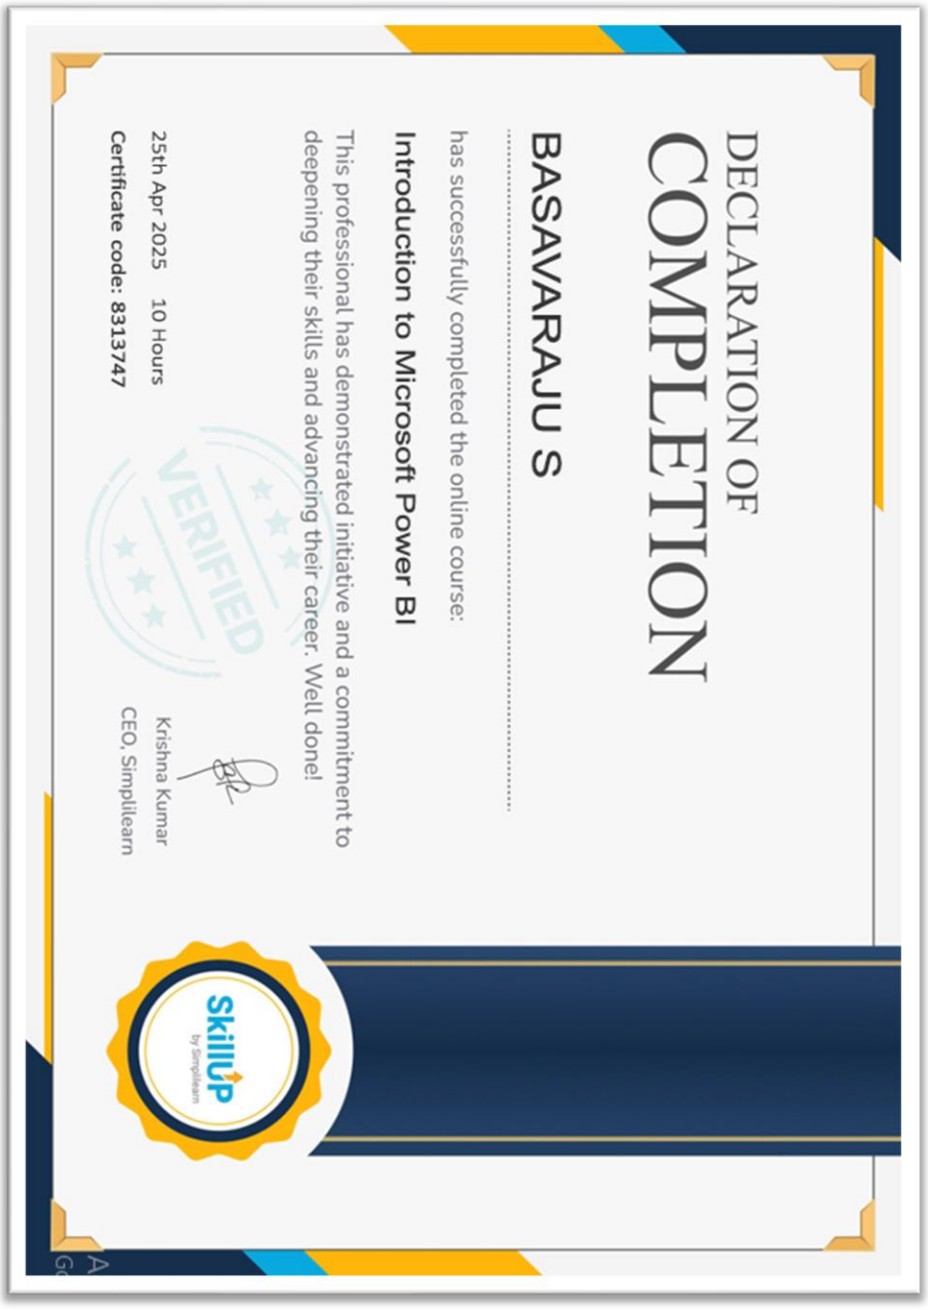

Place: Bangalore

Date:21.04.2025 **Signature**

DELL TRAINING CERTIFICATE (OFFLINE)

SIMPLILEARN CERTIFICATE (ONLINE)

ACKNOWLEDGMENT

Firstly, I would like to pass on my sincere appreciation to Executive, BCUSMS, Bengaluru City University for giving me with this brilliant opportunity to work on a venture for fulfilling my MBA Degree.

I would like to express my significant appreciation to **Dr NIRMALA M** Chairperson of administration department, Bengaluru city University for their commitment of my extend report.

I owe extraordinary obligation of appreciation and most profound much appreciated to my Extend direct **Ms BRUNDA S** Faculty of BCUSMS for her consistent back and direction all through the course of my work. It is as it were his cognizant efforts.

I also take this opportunity to acknowledge the contribution of the trainers and all faculty members of the department for their kind assistance and cooperation during the development of my project. Last but not the least, I acknowledge my friends for their contribution in the completion of the project.

I would like to acknowledge that this project was completed entirely by me and not by someone else

Thanking you

BASAVARAJU. S

P18UZ23M015063

CHAPTER – 1

INTRODUCTION OF POWER-BI SOFTWARE

1.1 Power-BI software

Figure 01: Power BI logo

source: https://www.pngmart.com/files/23/Power-Bi-Logo-PNG.png

Power BI is effective apparatus, employments to change the information into visualization which includes different steps to speak to the information in a clear organize for the decision-making prepare in an organization. This visualization makes a difference to know the history of the company or the trade organization and make remedial choice agreeing to that.

It is a Trade Expository benefit given by the Microsoft Company that gives intelligently visualization and commerce insights capabilities. It permits the client to moment the information, change the required arrange, channel the required information and utilize different charts to make the report or the dashboard to pick up the profound experiences of their commerce organization.

It makes a difference the organization to take best choice accessible to them by examining and visualizing the data.

1.2 Meaning of Power-BI

Power BI stands for "Commerce Insights." It is effective device made by Microsoft that makes a difference businesses and people dissect information, reveal experiences, and make educated decisions.

Power BI is information visualization apparatus that changes over the information from different sources like essential and auxiliary source into inventive reports and dashboard. As information collected may be unstructured information or may not be in the clear shape, so this application makes a difference to change the collected information into clear format.

It is a user-friendly application accessible to everybody in the nation, particularly for the trade substances and the people who are commonplace around Microsoft Power BI as it offers a run of instructional exercises and online assets to offer assistance the client to learn in his best way to get it in exceptionally successful way.

It is more adaptable compared to other visualization desktops with driving working frameworks in the windows and android and moreover it gives the best cloud-based administrations along with the desktop-based interface.

1.3 Evaluation of Power BI

• **Beginnings (2010-2011):** Power BI started as a set of Exceed expectations add-ins called Power Turn and Power Query, planned to upgrade information investigation capabilities. It was at first created by Microsoft's SQL Server Announcing Administrations group and was known as "Extend Crescent."

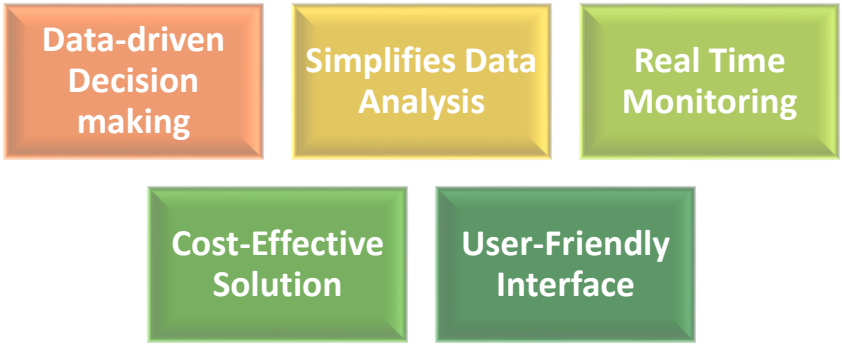

• **To begin with Discharge (2013):** Microsoft revealed Power BI as portion of Office 365 in September 2013. It was built on the establishment of the Excel-based devices but presented modern highlights like intelligently dashboards and cloud-based services.

• **Open Dispatch (2015):** Power BI was authoritatively discharged to the public on July 24, 2015. This stamped its move into a standalone item with desktop, web, and versatile versions.

• **Procurement of DATAZEN (2015):** Microsoft obtained DATAZEN, a portable commerce insights company, to improve Power BI's portable capabilities. Numerous of the visuals in Power BI nowadays begun from DATAZEN.

• **Continuous Advancement**: Over the long time, Microsoft has included various highlights, such as common language queries, AI-driven bits of knowledge, and enterprise-level security. Power BI has ended up a key component of the Microsoft Power Stage, joining consistently with apparatuses like Power Apps and Power Computerize.

1.4 Need of Power- BI software

1.5 Features of Power BI

A. Information Connectivity

Connects to 100+ data sources, including Excel, SQL databases, cloud platforms (Azure, Google Analytics, Salesforce), APIs, and more.

B. Data Transformation

Uses Power Query Editor to clean, merge, and shape data before analysis

C. Data Modeling

Supports connections, calculated columns, and measures utilizing DAX (Data Analysis Expressions) for progressed analytics.

D. Intuitively Visualizations

Offers bar charts, line charts, pie charts, maps, framework tables, KPI indicators, and more. User can make intelligently dashboards with filters and drill-through options.

E. AI & Machine Learning Integration

Built-in AI-powered highlights like key influencers, peculiarity discovery, and forecasting. Integration with Azure Machine Learning for advanced predictive analytics.

F. Real-Time Data Monitoring

Supports streaming datasets, empowering businesses to track real-time data updates. Used in industries like finance, manufacturing, and IoT monitoring.

G. Security & Compliance

Role-Based Access Control (RBAC): Restricts data access based on client roles. Data Encryption & Compliance: Meets security guidelines like GDPR and ISO.

1.6 Positive and Negative aspects of Power BI

Positive aspect of Power BI

1. Accessible Interface:

Power BI's drag-and-drop highlights and instinctive plan make it available for non-technical users.

2. Integration Capabilities:

Seamlessly coordinating with Microsoft instruments (Excel, Groups, SharePoint) and bolsters associations with different other information sources like SQL databases, Salesforce, and Google Analytics.

3. Cost-Effective:

Offers a free form for person clients, and its paid plans are moderately reasonable compared to other BI tools.

4. Real-Time Analytics:

Allows following of live information streams, which is especially valuable for checking operational measurements and KPIs.

5. Customizable Visualizations:

Provides a wide extend of visuals and permits clients to make their claim custom visuals to suit their needs.

6. Advanced Analytics:

Includes AI and machine learning capabilities, such as common dialect inquiries and prescient analytics, empowering more profound insights.

7. Mobile Accessibility:

Enables clients to see and associated with reports on versatile gadgets, upgrading availability on the go.

8. Cloud-Based Platform:

Being cloud-based, Power BI permits for adaptability, simple sharing of reports, and collaboration over teams.

Negative aspect of power BI

1. Sharp Knowledge Curve for Developed Structures:

While essential highlights are simple to utilize, progressed functionalities like DAX (Data Analysis Expressions) and information model can be challenging for beginners.

2. Presentation Matters with Expansive Datasets:

Power BI may battle with execution or speed when working with exceptionally huge datasets or complex queries.

3. Limited Information Preparation:

While it has a few information change capabilities, complex ETL (Extract, Transform, Load) processes may require external instruments like SQL Server Integration Administrations (SSIS).

4. Cost for Premium Features:

The free form has impediments, and organizations with a huge client base may require to contribute in Power BI Professional or Premium for enterprise-level features.

5. Dependency on Web Connectivity:

As a cloud-based apparatus, Power BI depends on a steady web association for most of its features.

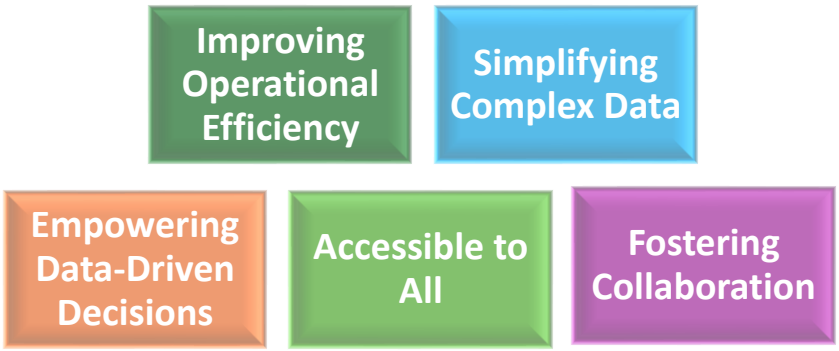

6. Restricted Export Options:

Exporting reports to formats like PowerPoint or PDF may have impediments in terms of format and interactivity.

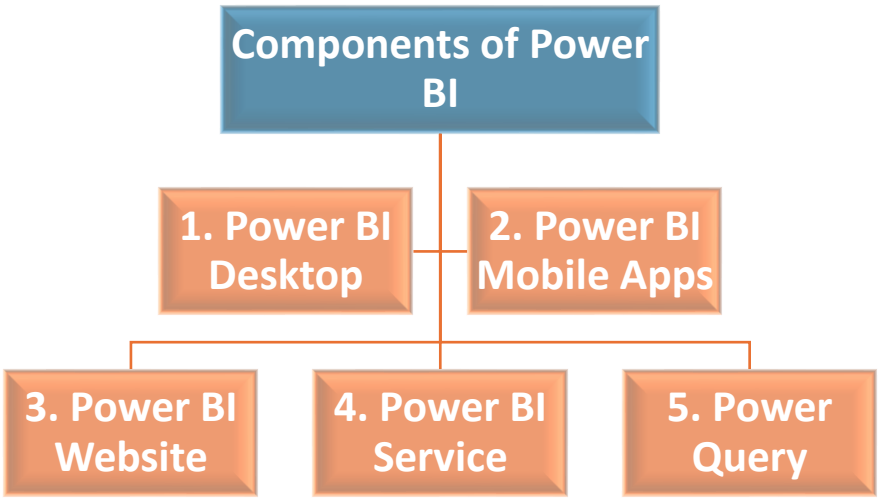

7. Limited Customization for A few Users:

While customizable, exceptionally particular visualization needs may require third-party integrative or progressed programming.

1.7 Importance of Power BI

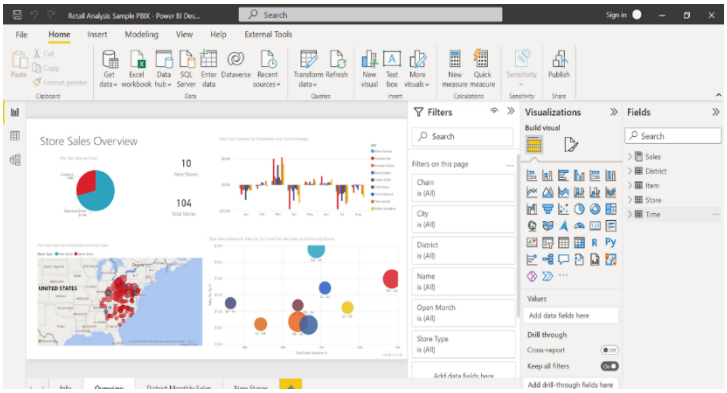

1.8 Components of Power BI

1. Power BI Desktop

Figure 02. Power BI Desktop

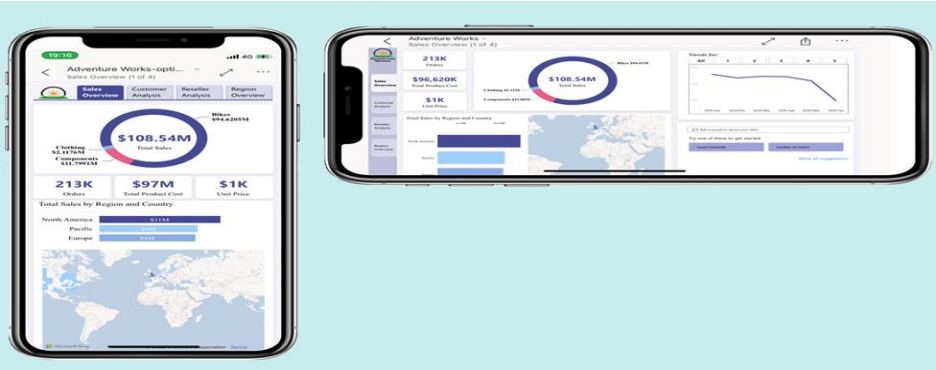

source:https://ngenioussolutions.com/blog/wp-content/uploads/2024/07/power-bi-desktop-dashboard.png

Power BI Desktop is a free, self-service business analytics tool that allows users to create and publish reports to the Power BI Service. It provides a complete set of

tools to connect to various data sources, including Excel files, SQL Server, Oracle, and other databases, as well as cloud-based services like Azure and Dynamics.

2. Power BI Mobile Apps

Figure 03. Power BI Mobile Apps

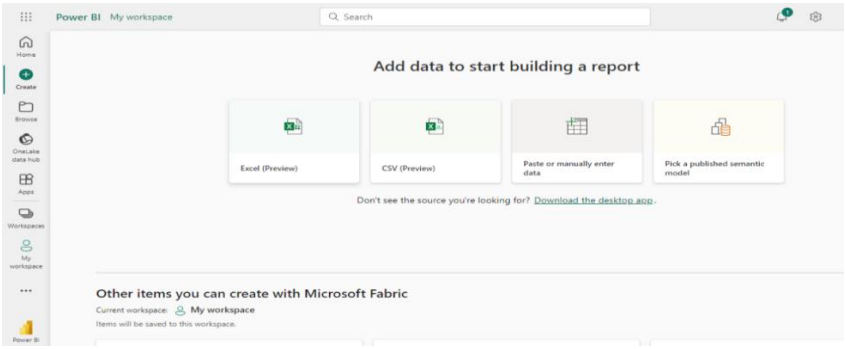

source:https://datascientest.com/wp-content/uploads/2022/09/powerbi-mobile-visualisation.png

Power BI Mobile Apps are an essential component of Power BI ecosystem, providing users with the flexibility to access and interact with their data from anywhere, at any time. These mobile applications are designed to extend the capabilities of the Power BI Service, allowing users to view and explore reports, dashboards, and datasets on their mobile devices.

3. Power BI Website

Figure 04. Power BI Website

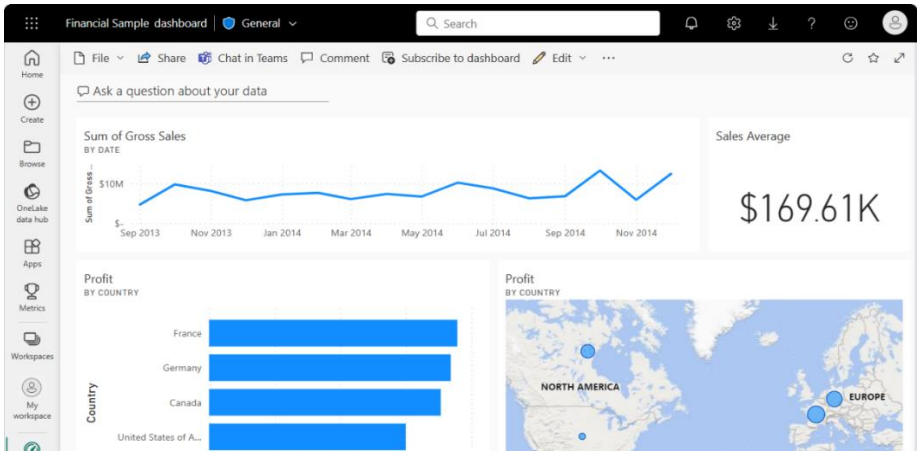

source:https://ngenioussolutions.com/blog/wp-content/uploads/2024/07/power-bi-website-dashboard.png

Power BI Website is a platform that allows users to create, publish, and share interactive reports and dashboards. The website provides a seamless experience for both content creators and consumers, ensuring that insights are easily accessible and actionable.

Content creators can leverage the Power BI Website to publish their reports and dashboards to a wide audience. This is achieved by creating a new report or dashboard in Power BI Desktop and then publishing it to the Power BI Service. Once published, the content can be shared with others through various methods, including embedding it in a website or portal, or by creating a Power BI App that can be accessed by all staff members.

4. Power BI Service

Figure 05. Power BI Service

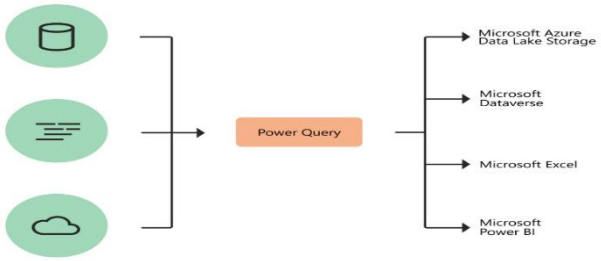

source:https://ngenioussolutions.com/blog/wp-content/uploads/2024/07/power-bi-service-dashboard.png

The Power BI Service is a cloud-based platform that allows users to consume and interact with reports and visual elements from their browsers. It provides features for creating, sharing, and consuming business insights, including the ability to publish reports from Power BI Desktop and create new reports directly in the service.

The service supports advanced collaboration and sharing features, including sharing reports and dashboards with others, creating workspaces for team collaboration, and distributing reports as apps to a wider audience.

5. Power Query

Figure 06. Power Query

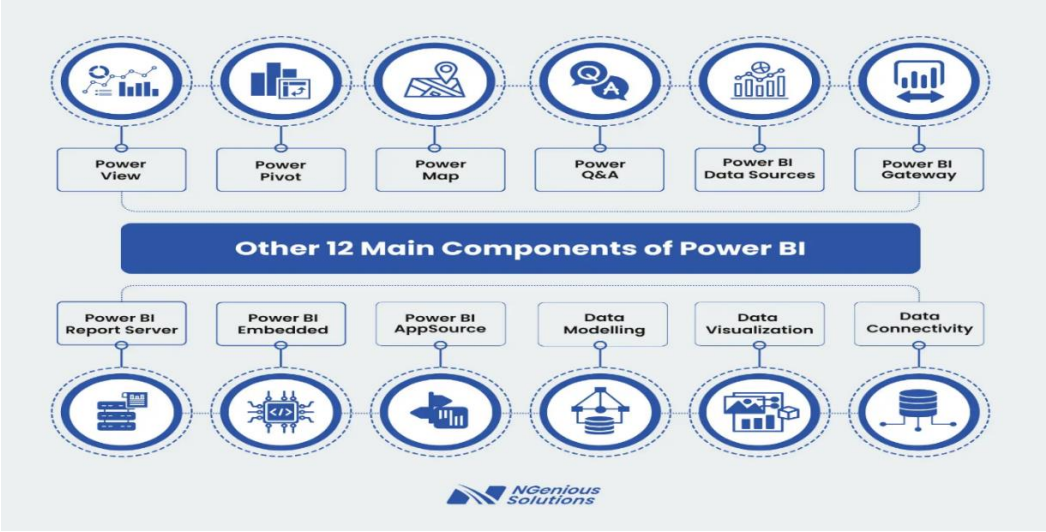

source:https://ngenioussolutions.com/blog/wp-content/uploads/2024/07/power-query.png

Power Query is a data transformation tool that allows users to connect to various data sources, shape and transform the data to meet their needs, and then load it into a worksheet or Data Model for analysis and reporting. It provides various features for creating reusable functions, which can be used to apply the same set of transformations to different queries or values, saving time and effort

6.Other components

Figure 07. Other components

source:https://ngenioussolutions.com/blog/components-of-power-bi/#other-main-components-of-power-bi

1.9 How to Download and Install the Power BI

Step 1: Download the Installer

• Go to the official Power BI Downloads page on Microsoft's website.

• Tap on "Download free" beneath Power BI Desktop. On the other hand, if you're utilizing Windows 10 or afterward, you can get it straightforwardly from the Microsoft Store.

Step 2: Select the Right Version

• If you're downloading physically, select the adaptation consistent with your system:

o 32-bit (x86): For more seasoned frameworks or if you're unsure.

o 64-bit (x64): For progressed frameworks (endorsed for prevalent performance).

• Spare the establishment record to your computer.

Step 3: Introduce Power BI

1. Find the downloaded establishment record and double-click it to begin the establishment process.

2. Take after the on-screen instructions:

o Acknowledge the allow agreement.

o Select the establishment envelope (or take off it as default).

o Press on "Introduce" to start the installation.

3. Once the establishment is total, tap "Finish."

Step 4: Dispatch Power BI

• Open Power BI Desktop from your Begin Menu or desktop shortcut.

• Sign in with a Microsoft account to begin utilizing Power BI (you can skip this step if you need to investigate without marking in)

1.10 Requirements for Installing Power BI

To introduce Control BI Desktop, here are the key requirements:

- **Operating Framework:** Windows 10, Windows 8.1, or Windows Server 2012 R2 or later.
- **Processor:** Least x64 Processor with 1.4 GHz speed (2.0 GHz or speedier recommended).
- **Memory (Slam):** At slightest 2 GB (4 GB or more recommended).
- **Hard Disk Space:** Least 1 GB of accessible space.
- **Display:** A screen with a determination of 1440×900 pixels or higher.
- **NET System:** Form 4.6.2 or later.
- **Browser:** Web Pilgrim 11 or afterward for certain highlights.

CHAPTER – 2

DESCRIPTION OF THE TRAINING

2.1 Type of Training Undergone

OFFLINE MODE

I actively participated in the Power BI training program conducted by Dell Technologies in partnership with the Learning Link Foundation. Throughout the program, I completed all the necessary steps and exercises as per the program's requirements.

Learning Objectives of Power BI

• Grasping the fundamentals of Power BI

• Importing and transforming data

• Modelling data

• Exploring innovative visualization techniques

• Crafting dashboards

• Advanced visualization and analytics

The training, which spanned over 30 hours in an offline format, allowed for extensive live interaction with both the trainer and fellow participants. This interaction provided an excellent opportunity to exchange ideas and insights. The experience was highly enriching, as we gained knowledge of new concepts and practical skills.

During the program, we explored some foundational aspects of Microsoft Excel, along with advanced features. However, our primary focus was on Power BI Desktop, a powerful tool for visualizing data from various sources.

We then proceeded to install Power BI Desktop from its official website. After downloading and installing the tool, the trainer provided an overview of its features. We were then tasked with uploading data from external sources, such as Kaggle or GitHub, in formats like Excel. We uploaded this raw data into Power BI and created a simple dashboard. The trainer introduced various charts and graphs, explaining their uses in different scenarios. We practiced creating dashboards using line.

Power BI Training Objectives

- **Understand What Power BI Actually Is**
- Learn what Power BI does, why it's useful, and how it helps turn boring data into cool, interactive dashboards.
- **Get Comfortable with the Interface**
- Get to know your way around Power BI — the layout, buttons, and what all the tools do, so you don't feel lost when you open it up.
- **Learn How to Bring in Your Data**
- Practice pulling in data from Excel, databases, websites, etc. You'll learn how to connect and clean it up so it actually makes sense.
- **Clean & Shape the Data (Without Losing Your Mind)**
- Use Power Query to tidy up messy data. Think of it like giving your data a shower before presenting it to your boss.
- **Create Eye-Catching Reports**
- Learn how to build visuals like bar charts, pie charts, maps, and tables that make people go "Whoa!"
- **Dig Into Data with DAX (Without Being a Programmer)**
- Understand the basics of DAX formulas (they're like Excel formulas with a twist) to make your reports smarter — like calculating year-over-year growth or filtering data in clever ways.
- **Make Interactive Dashboards**
- Combine visuals into one smooth, interactive dashboard so users can click around and explore the data on their own.
- **Share Reports with the Right People**
- Learn how to publish your reports to the Power BI Service (the online version), and how to share them securely with your team or clients.
- **Set Up Automatic Data Refresh**

- Automate your reports so they always show the latest info without you having to redo everything each week.

2.2 The Usefulness of The Training Undergone

We continued practicing these concepts until we were confident in creating dashboards using appropriate charts and graphs. The practical exercises and discussions with other participants and the trainer helped clarify any doubts we had. The offline training environment allowed participants to showcase their ideas, interact with others, and immediately apply what we were learning, making the sessions highly effective.

As we progressed, we tackled more complex data sources, learning advanced techniques related to data modeling and transformation. The trainer guided us through these advanced concepts, including merging data from different sources. This hands-on practice reinforced theoretical knowledge and solidified our understanding.

Upon mastering the basics, we advanced to more sophisticated data visualization techniques. We explored ways to customize charts, select colors based on specific requirements, and incorporate interactive features to enhance reports.

In this phase, we further honed our skills in data analysis and interpretation, especially through trend analysis and forecasting techniques. These skills helped us uncover hidden patterns in datasets, enabling better decision-making in real-time situations.

In summary, the 40-hour Power BI training program offers a comprehensive and effective means to enhance data analysis and visualization skills. This immersive course provides participants with a solid grasp of Power BI's features, functions, and best practices for data modelling, report creation, and dashboard design. By dedicating 40 hours to this training, individuals can develop the expertise required to create professional, interactive reports and dashboards, bolstering their ability to make informed, data-driven decisions confidently.

Overall, the 40-hour Power BI training program delivers a comprehensive learning experience, empowering participants to fully leverage Power BI for their data analysis and visualization projects.

Power BI training can be highly beneficial for individuals and organizations:

1. Data-Driven Decision Making

Helps users create interactive reports and dashboards.

Enables better understanding and communication of data insights.

2. In-Demand Skill

Power BI is widely used in many industries. Proficiency can enhance job prospects and career growth in roles like data analyst, business analyst, and more.

3. Increases Efficiency

Automates data collection, transformation, and visualization.

Reduces manual work with features like scheduled refreshes and real-time dashboards.

4. Integrates Well

Connects with multiple data sources like Excel, SQL Server, Azure, Google Analytics, etc.

Streamlines data from various platforms into one visual tool.

5. User-Friendly Interface

Training helps beginners get up to speed quickly.

Allows non-technical users to work effectively with data.

CHAPTER – 3

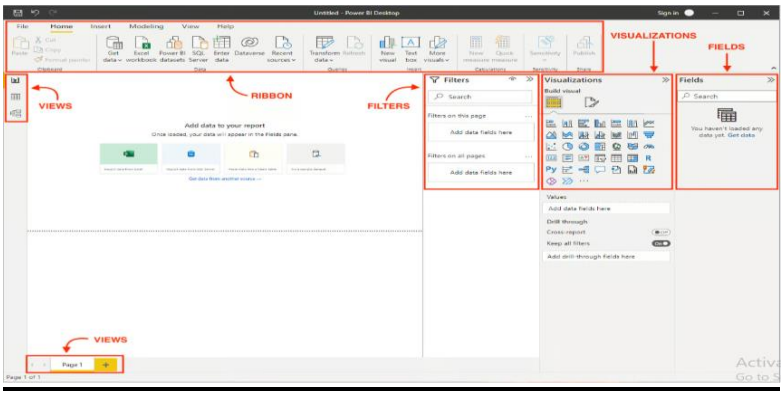

DATA ANALYSIS

3.1 Knowledge acquired

3.1.1 Basic Operation of Power-BI

This is the Power-BI Desktop interface, in this we can load Excel, SQL Data by clicking **Blank report** icon this will launch the application.

Figure 8. power BI interface

source:https://media.datacamp.com/legacy/v1718118404/image_d5d5fdaaa5.png

• **Ribbon-** the beat strip contains most of the controls and alternatives requested for raising the statement.

• **Sights-** this is completed active of the report see, the information see and the show see.

• **Canvas-** this is the fundamental plan range where visualizations and other basics are included.

• **Page selector-** for route to other runners in the report.

• **Filters-** areas can be included at that point to channel the information.

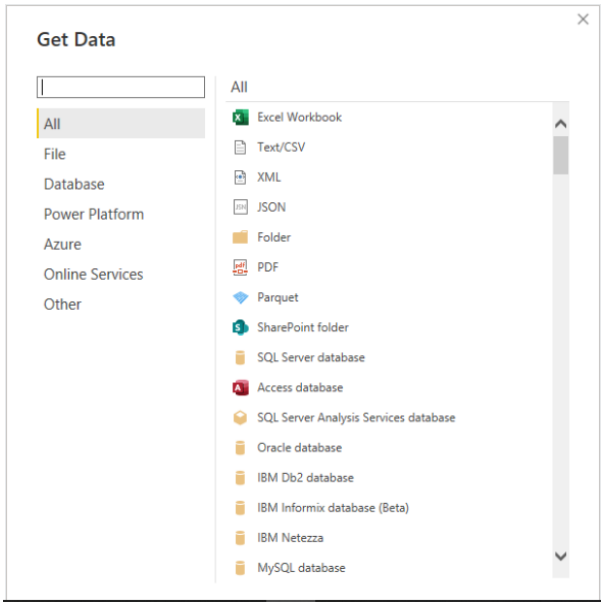

• **Visualizations-** this contains the list of accessible visualizations.

• **Fields-** this segment contains the tables and areas that are accessible in the information demonstrate.

3.1.2 Importing and Transforming Data in Power BI Desktop

Data sources and connections

Figure 9. Data source

source:https://media.datacamp.com/legacy/v1718118404/image_c468630806.png

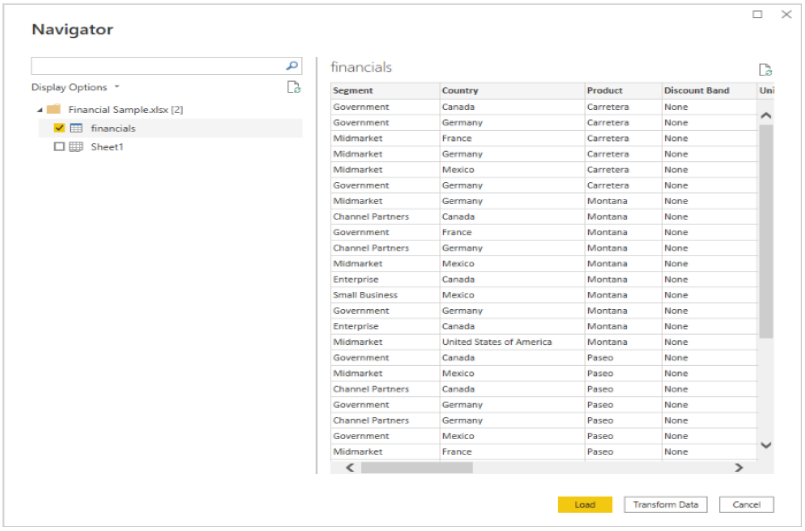

Power BI offers a wide assortment of upheld information sources and associations, making it unimaginably simple to interface to the information source of your choosing. For this instructional exercise, we will consequence a few financial information given by Microsoft.

3.1.3 Importing data and Power Query Editor

As stared at the beginning of the tutorial, we can download the sample data and import it by selecting the Excel data source.

A preview window will pop up where we can select the table or we want to import from the Excel file. Table and sheets are designated by their respective icons. It is generally better to import tables as they are neatly defined in Excel with strict headers and row boundaries.

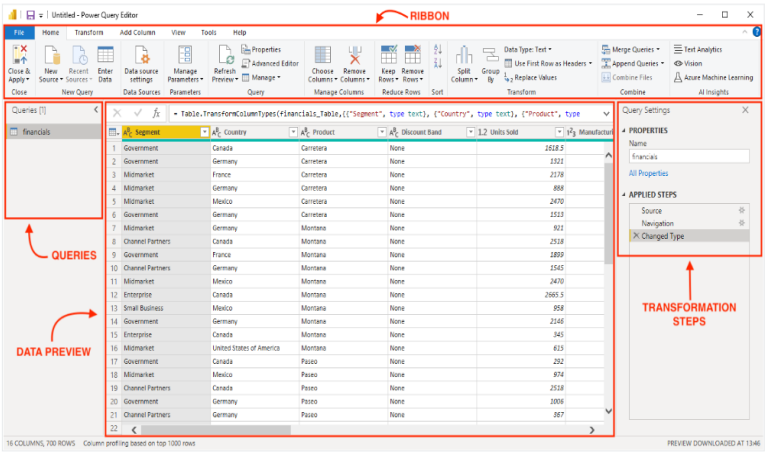

Figure 10. Data import

source:https://media.datacamp.com/legacy/v1718118404/image_a75f05ee1e.png

Here, you can also choose whether to load the data directly or straight to the Power Query Editor using the Transform Data option. Transforming your data before loading it in can be advantageous, as there are often small errors and issues that you may want to iron out first. Select Transform Data, and a separate window will open up for Power Query Editor.

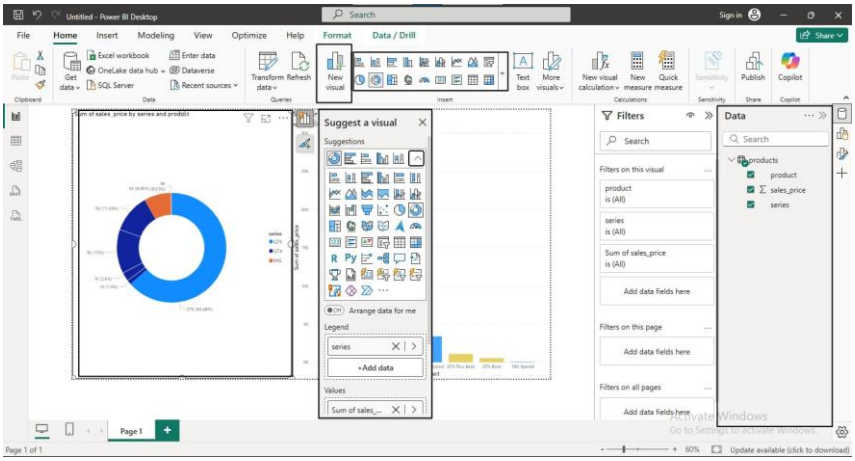

Figure 11. Power query editor

source:https://media.datacamp.com/legacy/v1718118404/image_a90d263779.png

3.1.4 Building and Designing Power BI Reports

Figure 12. Building visuals

source: C:\Users\banni\OneDrive\Desktop\New folder\WhatsApp Image 2025-04-16 at 10.34.45 PM.jpeg

After Data loaded successfully, we can build charts or visuals by clicking New Visual icon which was in the Ribbon section. After this we select the Data which we wanted to convert into charts or visuals. For Examples, line charts, pie charts, and etc.

And if another charts or visuals we required we should just repeat this process, and charts will be appeared. We can also convert line chart into pie chart or pie chart into donut chart.

3.2 Skills Mastered

3.2.1 Over view of the Data set

The Global Superstore dataset is a rich and expansive collection of sales data from hypothetical multinational retail corporation. This dataset encompasses a wide range of information, including details about products, orders, and sales across different regions and product categories.

This includes details about the products offered by the retail corporation, such their category, sub category, brand, and price.

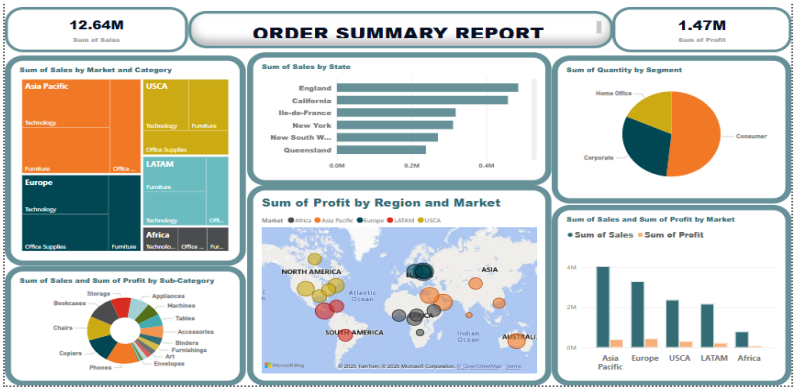

Overall, the Global Superstore dataset offers a wealth of information that can be leveraged to drive strategic decision-making and improve business performance in the retail industry. By analysing product sales, customer behaviour, geographic trends, and supply chain dynamics, retailers can gain valuable insights into their operations, identify areas for improvement targeted strategies to drive growth and success.

The Global superstore data set is divided into three Sub datasets, which are order, people, and return.

In the order dataset there are 24 columns and 51000 rows, each column includes Row ID, Order ID, Order date, ship date, ship mode, customer ID, customer name, segment, postal code, city, state, country, region and market etc.

3.2.2 Visualisation of Dash Board or Report

Figure 13. Order Summary Report

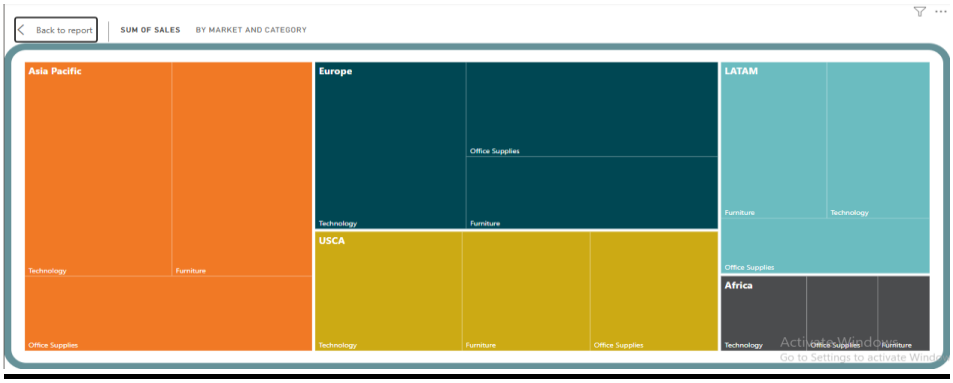

Source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/MAIN.png

This report provides a shot of deals and profit data across colourful regions and other business has generated 12.64 million in deals and 1.47 million in profit, indicating strong performance. The Asia Pacific request leads in deals, followed by USCA, LATAM, Europe, and Africa, suggesting high demand in those regions. Among

specific locales, California, England, and New York stand out as top- performing countries, contributing significantly to profit. Product-wise, Technology- related particulars dominate deals, followed by Furniture and Office inventories, helping prioritize force and promotional sweats. Profitable products similar as Bookcases, Copiers, and Storage particulars bring strong profit perimeters, making them an ideal focus for business optimization. This analysis highlights areas of success and enhancement, guiding decision- making to strengthen overall business performance. This report helps identify where deals are thriving and where advancements can be made.

Sales by Market and Category (Top-left Tree Map)

Figure 14. Tree Map

Source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/1.png

This Tree map visualizes **total sales distribution** across different **markets (regions)** and **product categories** (Technology, Furniture, Office Supplies).

Regional Performance Overview (Largest to Smallest)

1. **Asia Pacific**

- **Highest sales volume overall.**

2. **Europe**

- Second in sales contribution.
- Balanced contribution across **Technology, Furniture**, and **Office Supplies**.
- Indicates a well-Diversified product portfolio.

3. USCA (U.S. & Canada)

- Moderate sales.
- Fairly balanced across all three categories.

4. LATAM

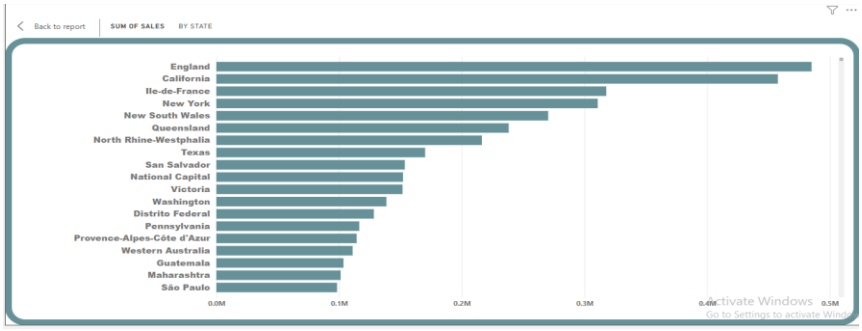

- Slightly behind USCA in overall sales.
- Strongest in **Furniture**, followed by **Technology** and **Office Supplies**.

5.Africa

- **Lowest sales** among all markets.
- Minimal presence in all three categories.
- Represents an **underpenetrated or developing market**.

Sum of Sales by State (Horizontal Bar Chart)

Figure 15. bar chart

Source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/2.png

This chart ranks different states/regions based on their total sales contribution, providing insights into regional performance.

Top Performing States

- England – Highest sales contributor, approaching 0.5M.
- California – Very close to England, suggesting strong market presence in the U.S.
- France (France) and New York – Also major contributors, slightly behind the top two.

Strong Mid-Tier Performers

- New South Ridges and Queensland (Australia) – Strong entertainers in the Asia Pacific region.
- North Rhine-Westphalia (Germany) and Texas – Essential deals districts in Europe and USCA.

Lower Tier Regions

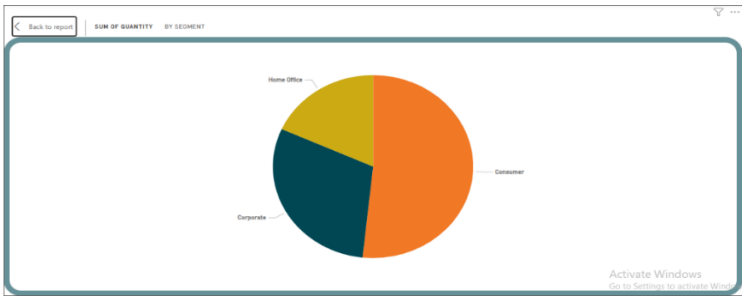

- Regions like Guatemala, Maharashtra (India), and São Paulo (Brazil) show lower sales, possibly indicating:
- Lower market penetration
- Less developed infrastructure
- Opportunity for market development.

Regional Grouping Insights

- North America (California, New York, Texas, Washington, Pennsylvania):
- Strong overall, especially the West and East coasts.
- **Europe:**
- Consistently high-performing.
- **Australia:**
- Represents a healthy market within Asia Pacific.
- Latin America (San Salvador, Distrito Federal, Guatemala, São Paulo):
- Moderate to low contribution, may benefit from growth strategies.
- Asia (National Capital, Maharashtra):
- Limited performance but shows presence—potential for targeted expansion.

Sum of Quantity by Segment (Pie Chart)

Figure 16. pie chart

Source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/3.png

This pie chart breaks down the total quantity of items sold by customer segment, revealing who the key buyers are across the business.

Segment-wise Breakdown

Consumer Segment

- Largest share of total quantity sold.
- Represents more than 45% of overall item quantities.
- Indicates high-volume purchasing behaviour from individual consumers.
- Suggests strong brand presence and acceptance in the B2C (Business-to-Consumer) space.

Corporate Segment

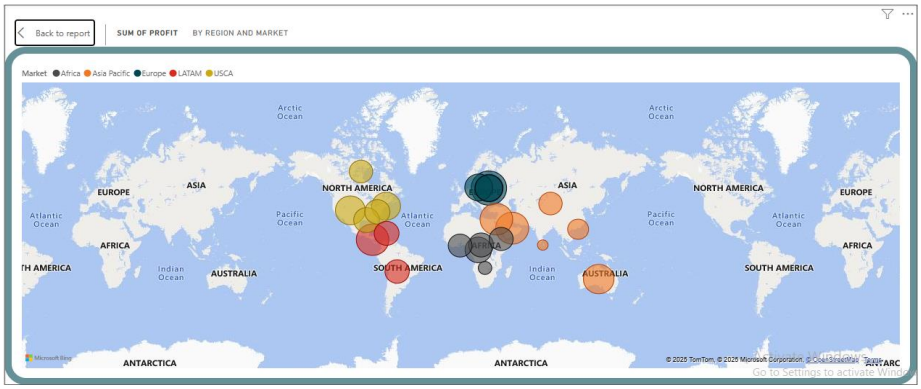

- Holds the second-largest share (roughly 30–35%).
- Shows solid engagement from B2B clients, likely buying in bulk for business operations.

Home Office Segment

- Accounts for the smallest share (around 15–20%).
- May indicate:
- A niche or emerging market.
- Potential for marketing and product bundling strategies.

Sum of Profit by Region and Market (Map View)

Figure 17. Map View

Source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/4.png

This map visualizes total profit across global markets using bubble sizes and colours to differentiate regions.

Regional Profit Breakdown

🟡 USCA (United States & Canada)

- Large yellow bubbles in North America.
- Indicates very high profitability.
- Strongest performing region overall.
- May benefit from deeper product lines, advanced logistics, or mature customer base.

🔴 LATAM (Latin America)

- Moderate-sized red bubbles in South America.
- Shows decent but lower profit than USCA and Europe.
- Potential for growth with improved market penetration or cost efficiency.

🔵 Europe

- Big blue bubbles, especially in Western Europe.
- Shows consistently strong profits.
- Likely due to economic stability, digital adoption, or existing brand loyalty.

🟠 Asia Pacific

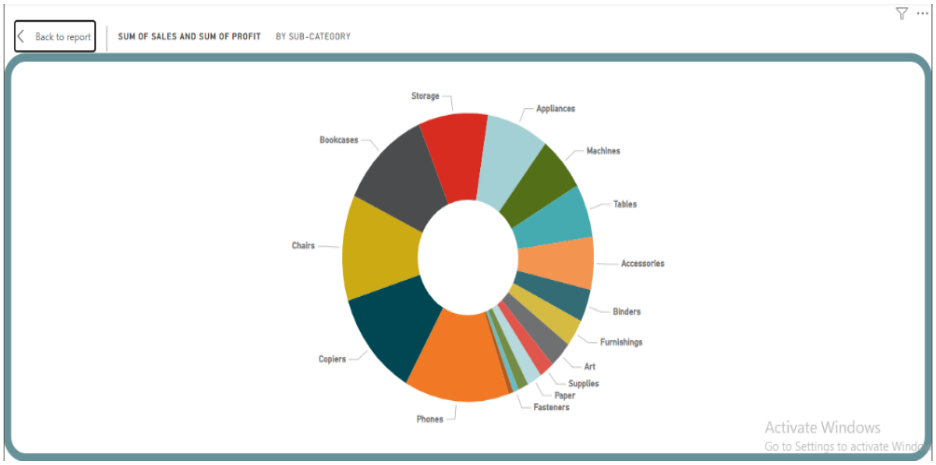

- Orange bubbles across Asia and Australia.
- Profitability varies:
  - Moderate in East Asia and Southeast Asia
  - Smaller bubbles in South Asia
  - Indicates emerging opportunities but perhaps higher operational costs or lower margins.

⚫ Africa

- Mostly smaller black bubbles.
- Suggests lower profitability overall.
- Could be due to market entry challenges, pricing pressures, or logistical complexities.

Sum of Sales and Sum of Profit by Sub-Category (Donut Chart)

Figure 18. Donut chart

source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/5.png

This donut chart visualizes total sales and profits across various product sub-categories, offering insight into top-performing and underperforming product lines.

Best Performing Sub-Categories

These cuts are unmistakably bigger, showing tall commitments to generally deals and/or profit:

Phones (Shinning Orange):

- Highest commitment, likely in both deals and profit.
- Suggests an enter item line with solid client request and sound margins.

Chairs (Brilliant Yellow):

- Substantial share—possibly driven by request in workplaces and homes.
- Good adjust of volume and profitability.

Copiers (Dim Teal):

- High income, in spite of the fact that this see incorporate high-cost machinery. Profitability may shift depending on benefit contracts or upkeep margins.

Bookcases (Dim Gray):

- Notable share, showing strong execution in the furniture segment.

Moderate/Low Performing Sub-Categories

Smaller portions show lower in general commitment to deals or profits:

- Fasteners, Paper, Craftsmanship Supplies (Lean slices):
- Likely low-value things with lower benefit margins.
- Often bulk/commodity things with restricted room for cost increases.

Binders & Furnishings:

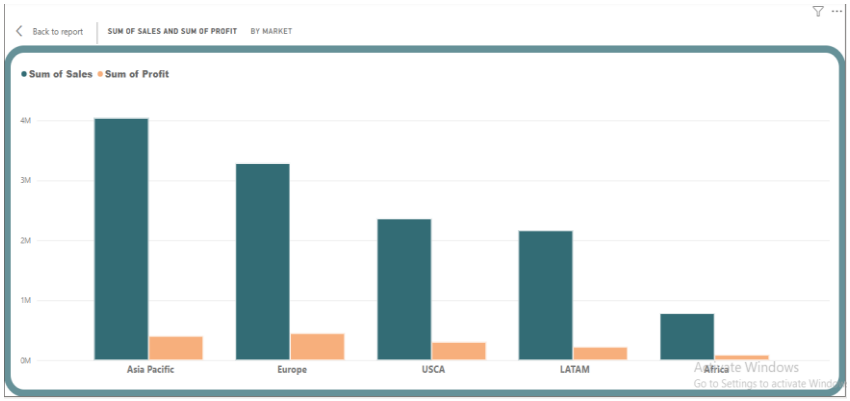

- Modest execution; may require bundling or focused on promoting to increment ROI.

Storage (Ruddy slice):

- Despite being a common category, it might not be creating solid sales/profits.

Sum of Sales and Sum of Profit by Market

Figure 19. Clustered column chart

source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/6.png

This bar chart compares total sales (dark teal) and profit (peach/orange) across different geographical markets, offering a clear view of performance by region.

Observations by Market:

1. Asia Pacific

- Highest Sales (~4M) among all markets.
- Profit is also significant, but proportionally smaller than the sales volume — possibly due to higher costs or competitive pricing.
- Still a strong performing market overall**.**

2. Europe

- Second-highest in sales (~3.3M).
- Interestingly, profit is highest or nearly equal to Asia Pacific, suggesting better margins or cost efficiency.
- Indicates a very profitable market, even if slightly behind in sales.

3. USCA (United States & Canada)

- Moderate sales (~2.4M).
- Profit is decent, but clearly lower than Europe for similar sales.
- May benefit from margin improvement strategies.

4. LATAM (Latin America)

- Close to USCA in sales (~2.2M).
- Lower profit than USCA, implying cost challenges or pricing pressure.
- Not as efficient despite healthy sales.

5. Africa

- Lowest sales (~1M).
- Minimal profit, potentially even negative or breakeven.
- Suggests a market with growth challenges or low profitability. Could require strategic revaluation.

Total Sum of Sales

Figure. 20 Card Chart

source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/7.png

The total revenue/sales across all regions, sub-categories, and markets values are 12.64 million (currency not specified, likely USD). this value aggregates all the individual market sales from the previous bar chart you shared.

Cross-Verification:

From the bar chart (Sum of Sales by Market), approximate values were:

Asia Pacific: ~4.0M

Europe: ~3.3M

USCA: ~2.4M

LATAM: ~2.2M

Africa: ~0.7M

Total ≈ 12.6M, which matches this card perfectly.

Total Sum of Profit

Figure 21. Card Chart

source:https://d.docs.live.net/443095e8b1115cff/Desktop/Basa/8.png

The total profit earned across all regions and product sub-categories is 1.47 million. This is the net amount gained after deducting costs from total sales (12.64M as previously shown).

Profit Margin Analysis:

To understand how efficiently sales were converted into profit**:**

Profit margin = (1.27M/12.64) * 100 = 11.63%

So, the overall Profit margin is – **11.63%,** meaning for every $100 in sales, the business earns - $11.63 in profit.

3.3 Proof for operations using skills

Figure 22. Using Power BI

Source:C:\Users\HP\OneDrive\Pictures\c31bfba7-e0dc-48e7-b527-4f86edeb2970.jpeg

At my college, I'm developing a Power BI dashboard to efficiently analyze and present data. Importing datasets from various sources and organizing them for analysis is where I start. To make sure the data was accurate and properly organized, I used Excel to clean, filter, and transform it. In order to extract useful insights and make the data more interactive and useful for decision-making, I also used DAX formulas to create linkages between tables

My attention turns to creating a dashboard that is easy to use after the data is prepared. One goal is to make the data presentation dynamic and interesting by adding visual components such as tables, charts, and cards. Users can dynamically filter and examine data thanks to these components. I place a lot of emphasis on the dashboard's design and layout to make it aesthetically pleasing, user-friendly, and consistent throughout.

Once the data was ready, I focused on designing a user-friendly dashboard. To give the data representation additional depth and make it more dynamic, I included visual components like as tables, charts, and cards.

I make the dashboard work more smoothly in order to increase performance. Enhancing data models, getting rid of pointless calculations, and implementing

practical steps to increase responsiveness are all part of this. Analyzing Project Management with Dashboard Insights of Vertex Alliance using Power BI BCUSMS, Bengaluru City University Page | 33. An essential component of this is testing, which helps me identify and fix any issues.

I improved the dashboard's performance to increase its usefulness. To guarantee prompt reaction, this entails improving data models, cutting down on pointless computations, and using effective strategies. Since testing aids in locating and resolving any possible problems, I view it as a crucial phase in this procedure. My ultimate objective is to develop a dashboard that makes data analysis easier, enables well-informed decision-making, and provides unambiguous insights.

CHAPTER – 4

PLACEMENT OPPORTUNITIES

4.1 Placement Opportunities in India

Power BI courses in India offer strong placement opportunities due to the high demand for data analytics and business intelligence professionals. These courses equip individuals with the skills to analyse and visualize data using Power BI, a tool widely used in various industries. This leads to career paths like Data Analyst, Business Intelligence Analyst, and Power BI Developer, among others.

Job Description

1. **Power-BI Developer**

The ideal candidate will be responsible for developing, publishing, and maintaining interactive dashboards and reports using Microsoft Power BI. The candidate will work closely with stakeholders to transform ram data into meaningful insights to drive business decisions.

Core role focused on building reports, dashboards, and data models using Power BI.

2. **Data Analyst**

Uses Power BI to analyse trends, visualize KPIs, and support business decision-making.

3. **Business Intelligence (BI) Analyst**

designs and implements BI solutions using Power BI, including dashboards, reports, and data integration.

4. **BI Developer**

Develops and maintains BI infrastructure, often using power BI for reporting and visualization.

5. **Data Engineer**

Prepares data pipelines and datasets consumed by Power BI dashboards.

6. **Data Scientist**

May use Power BI for exploratory data analysis and creating interactive visualizations for stakeholders.

7. **Reporting Analyst**

Specializes in creating and managing reports, often using Power BI to Present data in a user-friendly format.

8. Financial Analyst
Uses Power BI to monitor budgets, forecasts, and financial performance through interactive reports.

9. Operations analyst
Tracks operational metrics and process performance using Power BI visualizations.

10. Marketing Analyst
Builds dashboards to measure campaign performance, conversion metrics, and customer engagement.

11. CRM/Data Insights Analyst
Integrates CRM data (e.g., from salesforce or dynamics 365) with Power BI for customer insights.

Power BI Analyst Salary in India

Experience Level	Average Annual Salary (INR)	Range (approx.)
Entry-Level (0-2 years)	₹3.5 - ₹6 LPA	₹3 - ₹7 LPA
Mid-Level (2-5 years)	₹6 - ₹10 LPA	₹5 - ₹12 LPA
Senior-Level (5-8 years)	₹10 - ₹16 LPA	₹8 - ₹ 18 LPA
Lead / Managerial Roles	₹16 - ₹25+ LPA	₹15 - ₹30+ LPA (or more)

4.2 Global Opportunities for Power BI Professionals

1. United States

Job Titles: Power BI Examiner, BI Designer, Information Examiner, Information Visualization Specialist.

2. United Kingdom

Job Titles: BI Investigator, Power BI Expert, Announcing Analyst.

3. Canada

Job Titles: Commerce Insights Engineer, Information Investigator (Control BI), BI Specialist.

4. Australia

Job Titles: BI Specialist, Power BI Investigator, Information Visualization Engineer.

5. Germany

Job Role: Information Examiner, BI Engineer, Power BI Consultant

Remote/Contract Roles

Power BI professionals can find freelance or remote jobs worldwide through platforms like Upwork, Total, and LinkedIn.

Freelancer Rates: $30–$100/hour depending on expertise and region.

4.3 Entrepreneurial Opportunities with Power BI

1. Freelance Power BI Consultant

What you do: Help clients create dashboards, optimize data models, set up Power BI Service, and provide training.

Where to find work:

Platforms like Upwork, Fiverr, Total, Freelancer

Direct outreach on LinkedIn

Partner with small businesses that lack in-house analytics

2. Data Analytics Agency (Small Business)

Start a boutique agency that offers:

Dashboard/report development

End-to-end BI solutions

Data visualization strategy

Power BI + Power Apps integrations

Target clients:

New business, e -commerce businesses, real estate firms, NGOs, or healthcare providers

3. Power BI Training & Courses

Create and sell:

Online courses (via Udemy, Teachable, Skills hare)

YouTube tutorials with monetization

Paid workshops or corporate training sessions

Bonus: Position yourself as a Power BI thought leader and charge for consulting, speaking, or coaching.

4. Power BI Template Marketplace

Build and sell ready-made Power BI templates:

Financial dashboards

Sales trackers

HR analytics

Project management templates

Sell via:

Your own website

Gum road

Etsy (yes, digital products!)

App Source (Microsoft marketplace)

CHAPTER – 5

LEARNING EXPERIENCE

5.1 Learning Experience

I recently had the chance to participate in a 30-hour in-person training program at Dell Technologies.

The program was a great blend of lectures, live demos, hands-on practice, and case studies. This experience really helped connect the dots between what I learned in school and how it's applied in the real world.

Brief on New Skill Learned

During a 30-hour offline training session at Dell Technologies, I gained several key skills in data analytics, and Power BI. These skills are incredibly valuable for taking data-driven decisions**.**

Learning Power BI equips you with a strong set of **technical, analytical,** and **Business intelligence.**

What I Actually Learned from Power BI

when I dive into power BI, I don't just learn how to make dashboards- I actually build mix of **Technical, analytical, and Business-focused skills** that helps to understand and explain data in a meaningful way.

Hands-On Technical skills

I learn how to bring messy data to life- combining, cleaning, and shaping it into something useful using tools like Power Query.

I get comfortable creating **smart data models –** kind of like designing the blueprint behind the scenes so everything connects and makes sense.

I pick up DAX (a formula language), which lets you do all kind of calculations, like year-to-date sales or growth percentages- way beyond simple Excel formulas.

Visuals become my superpower, I figure out how to build **interactive dashboard and reports** that tell a story, not just display numbers.

I understand how to connect to different data sources – Excel files, databases, even websites – and keep everything up to data automatically.

Under Technical skills what I learned

1. **Data Modelling**
   - Creating relationships between tables
   - Using star/ snowflake schema
   - Normalization and denormalization concepts

2. **DAX (Data Analysis Expressions)**
   - Writing calculated columns, measures, and tables
   - Mastering functions like **CALCULATE, FILTER, ALL, SUMX,** etc.

3. **Power query**
   - Data cleaning and transformation
   - Merging, appending, and shaping data

4. **Data Visualization**
   - Creating insightful reports and dashboards
   - Using visual elements like slicers, cards, maps, charts, etc.
   - Applying best practices for visual storytelling

5. **Data connectivity**
   - Connecting to various data sources (Excel, SQL Server, Web, SharePoint, etc)
   - Working with APIs or real – time data sources

6. **Publishing and Sharing**
   - Publishing reports to Power BI Service
   - Setting up scheduled refreshes
   - Creating and managing dashboards and workspaces

Analytical and Business Intelligence Skills

1. **Data Interpretation**

2. **Problem Solving**

3. **KPL and Metric Design**

4. **Storytelling with Data**

By learning Power BI, I am not just learning a tool – I am learning how to think like a data professional. Turning ram information into clear, actionable insights that can actually changes how a business operates.

Learning Experience: Power BI & the Global Superstore Dataset

Working with the Global Superstore dataset in Power BI was a game-changer in my data learning journey. It gave me the chance to apply real-world data analysis skills in a business context — like being a data analyst for a global retail company

What I Learned:

Data transformation matters — clean, structured data makes all the difference in building reports that actually make sense.

I got comfortable with DAX formulas, especially for time intelligence (like monthly or yearly trends).

I learned how to tell a story with data — not just show charts, but provide insights like:

"Sales in Asia are high, but profit margins are lower than in Europe — possibly due to discounts or shipping costs."

I discovered the power of user-friendly dashboards, where filters, slicers, and tooltips make insights easy to explore for non-technical users. And I understood how to design for business users — focusing on clarity, speed, and decision support.

Why It Mattered: The Global Superstore project helped me think like a business analyst. It wasn't just about numbers — it was about solving problems, identifying growth opportunities, and creating tools that help teams make smarter decisions.

5.2 Challenges Faced:

Learning Power BI through the Global Superstore dataset was both exciting and, honestly, a little overwhelming at times.

Here's a real look at some of the challenges I faced along the way:

1. Cleaning Up Messy Data

At first glance, the Global Superstore data looked clean — but it wasn't.

There were missing values, duplicate rows, weird date formats, and inconsistent region names.

It felt like playing a never-ending game of "spot the error."

Lesson learned: Always expect to spend serious time cleaning your data before you get to the "fun" part.

2. Handling Relationships Between Tables

Global Superstore had multiple tables — Orders, Returns, People, etc.

. Sometimes my visuals broke because I had created wrong or confusing relationships.

Lesson learned: Relationships are like the wiring of your dashboard — one bad connection can mess up everything.

3. Choosing the Right Visuals for Big Data

Because there's so much information (categories, sub-categories, countries, cities, regions, sales, profits...),

I made the mistake early on of trying to show too much on one page. It made my dashboard look like a chaotic newspaper.

Lesson learned: Less is more. Focus on the few key stories the data is trying to tell.

4. Balancing Detail vs Big Picture

Sometimes I wanted to zoom into details — like how one product performed in one city — but then I'd lose the bigger story about regional trends or overall profit.

Finding the right balance between drill-down detail and big-picture overview was tough at first.

Lesson learned: Think about what your audience really needs to see at first glance — then give them options to explore more if they want.

5. **Making Sense of DAX**

   Some calculations were easy (like SUM of sales), but things like calculating Year-over-Year growth, profit margins, or return rates needed DAX formulas that weren't so intuitive at first.

Lesson learned: DAX is powerful, but it's better to build it step-by-step rather than rushing complex calculations.

6. Designing a Clean, Easy-to-Use Dashboard

The temptation to throw in flashy visuals was real — but when I tested the dashboard with friends, they were confused:

"Where do I even look first?"

Lesson learned: Design a dashboard like a guided story, not a puzzle.

Final Reflection

Working with Global Superstore data showed me that Power BI isn't just about technical skills — it's about patience, creativity, and thinking like a storyteller.

Every challenge made me better, and by the end, I wasn't just creating charts —

I was building dashboards that could actually help people make smarter business decisions.

VODAFONE INTELLIGENT SOLUTION

(ONLINE)

figure:23 VOIS Logo

source:https://d12aarmt01l54a.cloudfront.net/cms/images/Media-20230912183943/808-440.png

The 'VOIS for Tech: College Engagement Program', CSR activity of Vodafone Shrewdly Arrangements (VOIS), planned and executed by Vodafone Thought Establishment and executed by Interfacing Dreams Establishment was conceived given the changing world arrange in the region of innovation. This program empowers the understudies to support themselves by procuring abilities to plan significant tech arrangements for genuine world problems.

TYPES OF TRAINING PROGRAM OFFERED BY VOIS

This program will empower the understudies to prepare themselves by securing aptitudes which will make them work prepared and moreover empower them to contribute through important arrangements to genuine world innovative problems.

The understudies can investigate the LMS to enlist into certifications of their choice from the taking after tech categories:

- Information Analytics

- Machine Learning
- Counterfeit Intelligence
- Cloud Computing
- Cybersecurity
- Blockchain
- Control BI
- Full stack Web Advancement

LEARNING LINK FOUNDATION

figure:24 LLF Logo

source: https://www.learninglinksindia.org/

The Learning Links Foundation is a registered not-for-profit organization called Believe, established back in 2002.

Purpose:

Our goal is to transform learning by highlighting its lifelong significance and impact. We aim to inspire genuine learning from an early age and create connections that facilitate learning throughout various stages of life.

CONCLUSION

My Power BI Training Journey with the Global Superstore Dataset:

Working with the Global Superstore dataset during my Power BI training was a really eye-opening experience. It wasn't just about learning a tool — it felt like stepping into the shoes of a data analyst for a global retail company and figuring out how to make sense of real business data.

I started by diving into raw files — multiple tables with orders, returns, regions, and people. Using Power Query, I learned how to clean, combine, and shape all that messy data into something structured and reliable. That process taught me how important it is to start with clean data — it's like laying the foundation before building anything meaningful.

Once the data was ready, I built a data model and used DAX formulas to calculate things like total sales, profit margins, return rates, and year-over-year growth. I even explored time-based trends, like which regions grew over time and where profits were dropping. That was the moment I realized how powerful data can be when you ask the right questions.

Then came the fun part — building dashboards. I created interactive reports where users could filter by region, category, and customer segments, and instantly see trends through visuals like bar charts, line graphs, and maps. These dashboards didn't just display numbers — they helped tell a story. For example, I found that while some regions had high sales, their profits were lower due to high return rates or deep discounts. Those little insights made the whole project feel real and impactful.

One of the biggest things I took away from this project is how to turn data into something useful — something that actually helps people make better decisions. I learned not only the technical side of Power BI but also how to think like a problem-solver and communicate insights clearly.

To sum it up, this training helped me build solid skills in Power BI — from data cleaning to modelling, DAX, and visualization. But more importantly, it gave me the confidence to work with real-world data and deliver insights that matter. It's a big step forward in my journey into the world of data.
